

Figure 1 is a line graph showing the percentage of DRG area remaining over 10 days after treatment with different concentrations of 1,25-(OH)₂D₃. The main graph shows a dose-dependent decrease in DRG area, with 100 ng/ml showing the most rapid and significant loss. An inset graph shows that 5 ng/ml and a control group maintain a higher percentage of DRG area over time.

Days after treatment	100 ng/ml (%)	50 ng/ml (%)	25 ng/ml (%)	5 ng/ml (%)	control (%)
0	100	100	100	100	100
4	15	18	30	110	150
8	5	10	20	160	230
10	0	0	5	210	280
